Introduction

A web-based literary quote library designed to help readers organize and retrieve quotes through context.

Problem

Readers often save quotes in isolated ways, preserving the text but losing the context.

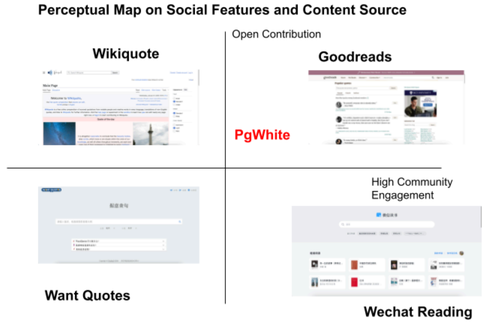

Most quote collections also rely on:

- simple keyword search
- flat tags
- isolated entries

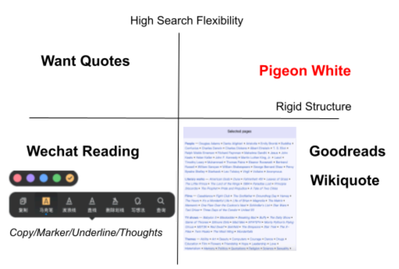

Design Goals

- context-rich
- reader-centered
- easy navigation
- multi-dimensional retrieval

Perceptual Map on Social Features and Content Source

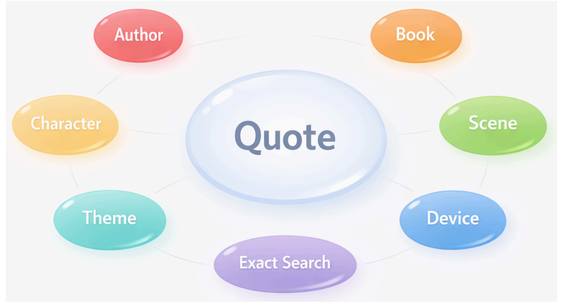

Perceptual Map on Search Flexibility and Collection Structure

Approach

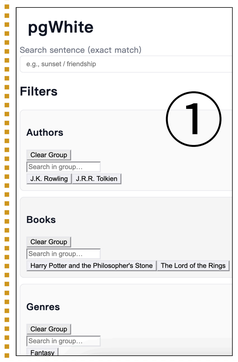

Pigeon White Library treats each quote as more than a single line of text.
Instead of storing quotes as isolated entries, the project organizes them through multiple connected tags

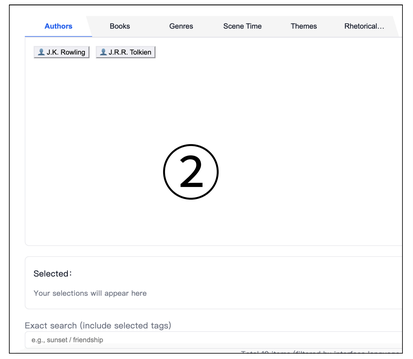

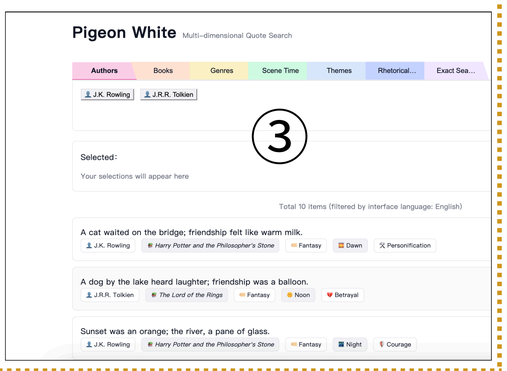

Development Iterations

Major changes included:

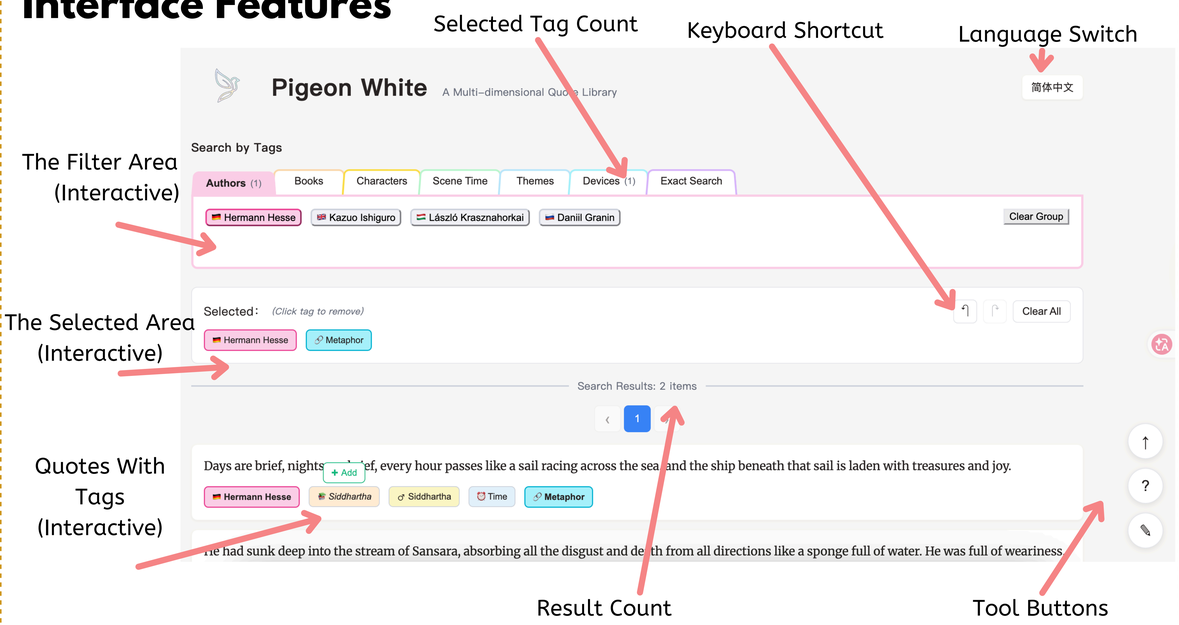

1. simplifying visual hierarchy
2. improving spacing and grouping
3. making search and filtering more intuitive
4. color scheme adjustment

Interface Features

Tech Overview

- Nuxt for the interface
- bilingual support with i18n
- Version Controlled through GitHub
- Deployed on Vercel
- Railway-hosted MySQL database

NuxtJS · Railway · Vercel · MySQL · GitHub

Future Dierections

Future development may include:

- multi-user participation
- personalized libraries
- machine-learning-assisted tagging and retrieval

Contribution & Sources

Author Contribution Statement
YX: Conceived the project, designed and implemented the system, developed the interface, and prepared the poster.
VS: Provided supervision, guidance, and feedback on project design and presentation.
